

# 1.6 Ω On Resistance, ± 5 V, +12 V, and +3 V Quad SPST Switches

## DESCRIPTION

The DG9424E, DG9425E, DG9426E are monolithic quad single-pole-single-throw analog switches. The G9424E and DG9425E differ only in that they respond to opposite logic levels. The DG9426E has two normally open and two normally closed switches. It can be given various configurations, including four SPST, two SPDT, and one DPDT.

Using BiCMOS wafer fabrication technology allows the DG9424E, DG9425E, and DG9426E to operate on single and dual supplies. Single supply voltage ranges from 3 V to 16 V while dual supply operation is recommended with ± 3 V to ± 8 V. Each switch conducts equally well in both direction when on, and blocks input voltages up to the supply levels when off.

The low and flat on resistance over the full input signal voltage range bring excellent linearity, reduce insertion loss and signal distortion, make them ideal for data acquisition and programmable gain control applications. These switch characters also make them ideal fit for audio signal switch and reed relay replacement.

The DG9424E, DG9425E, DG9426E feature low power dissipation, fast switching speed, and low voltage logic control threshold. Proprietary design enables the low charge injection that minimize the switching transient.

Operation temperature is specified from -40 °C to +85 °C. The DG9424E, DG9425E, DG9426E are available in 16 lead TSSOP packages.

## FEATURES

- 3 V to 16 V single supply or ± 3 V thru ± 8 V dual supply operation
- 1.6 Ω typical on resistance
- 3 V logic compatible for control
- Bi-directional rail to rail signal switching
- Fast switching speed
- < 0.2 nA switch on leakage
- Break-before-make switching - DG9426

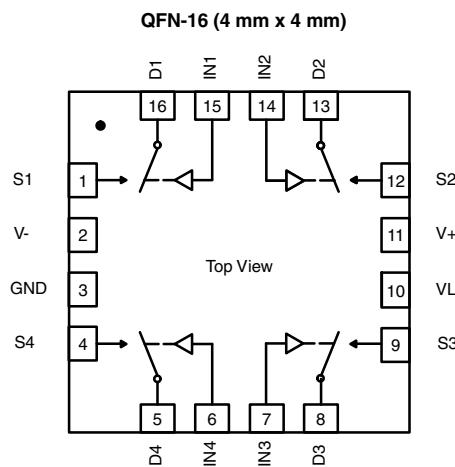

## BENEFITS

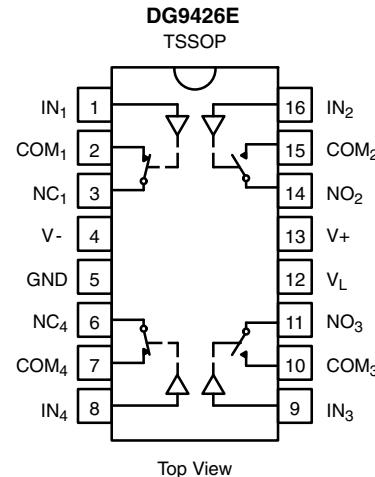

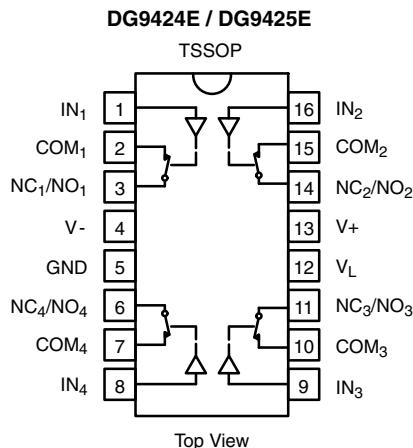

- Wide operation voltage range
- Low signal errors and distortion
- Fast switching time
- Simple interfacing

## APPLICATIONS

- Automatic test equipment
- Data acquisition systems
- Meters and instruments
- Medical and healthcare systems
- Communication systems
- Audio and video signal routing
- Relay replacement
- Battery powered systems
- Computer peripherals
- Audio and video signal routing

<b>ABSOLUTE MAXIMUM RATINGS</b>					
<b>PARAMETER</b>		<b>LIMIT</b>	<b>UNIT</b>		
V+ to V-		-0.3 to +18	V		
GND to V-		18			
V <sub>L</sub>		(GND - 0.3) to (V+) + 0.3			
IN, COM, NC, NO <sup>a</sup>		(V-) - 0.3 to (V+) + 0.3			
Continuous current (NO, NC, COM pins)		100	mA		
Peak current, S or D (pulsed 1 ms, 10 % duty cycle)		200			
Storage temperature		-65 to +150	°C		
Power dissipation (package) <sup>b</sup>	16-pin TSSOP <sup>c</sup>	450	mW		
		178	°C/W		
ESD human body model (HBM); per ANSI / ESDA / JEDEC® JS-001		>1500	V		
Latch up current, per JESD78D		400	mA		

**Notes**

- a. Signals on NC, NO, COM or IN exceeding V+ or V- will be clamped by internal diodes. Limit forward diode current to maximum current ratings
- b. All leads welded or soldered to PC board
- c. Derate 7 mW/°C above 25 °C

Stresses beyond those listed under "Absolute Maximum Ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated in the operational sections of the specifications is not implied. Exposure to absolute maximum rating conditions for extended periods may affect device reliability.
