## DISTINCTIVE CHARACTERISTICS

## Standard with Enhanced LED Illumination:

- Broad and even light diffusion
- Consistent backlighting
- Low energy consumption

Programmable LCD<br>Variety of LED Backlighting Colors<br>Rubber Dome<br>Epoxy Sealed Straight PC Terminals

RGB or bicolor red/green backlighting provides infinite color
 availability.
Programmable to display graphics, alphanumeric characters and animated sequences.
Integrated liquid crystal display provides wide viewing angle with high contrast and clarity.
Viewing area for switches $17.0 \mathrm{~mm} \times 13.0 \mathrm{~mm}$
(horizontal $\times$ vertical) at $36 \times 24$ pixels;
Display viewing area $14.4 \mathrm{~mm} \times 11.8 \mathrm{~mm}$.
Dome gives crisp tactile feedback to positively indicate circuit transfer.

High reliability and long life of one million actuations minimum. Epoxy sealed terminals prevent entry of solder flux and other contaminants.

Optional accessories available to enhance panel design and simplify production process.

## DISTINCTIVE CHARACTERISTICS

## Standard with Enhanced Illumination:

Programmable to display graphics, alphanumeric characters and animated sequences.

Standard SMARTDISPLAY ${ }^{\text {MM }}$ can be used alone or in conjunction with electromechanical switches.

Integrated liquid crystal display provides wide viewing angle with high contrast and clarity.

RGB LED provides numerous color variations.
Viewing area $14.4 \mathrm{~mm} \times 11.8 \mathrm{~mm}$ (horizontal $\times$ vertical) at $36 \times 24$ pixels.

## Function

Power source for LCD drive
Cathode for green

Power source for logic circuit
Display serial data bit. Note: to map the display data, because of the difference between the number of internal shift register data (40) and the single line of LCD pixels (36), the first four bits of data shifted will be dummy bits.
Clock used by 40 -bit internal shift register of the switch, shiffing the display data bit presented at Din at falling edge.
Line data latch pulse will latch content of internal 40 -bit shift register at falling edge for one line of display. LP will also increment the display line by one.
Cathode for red
The marking signal for the first line data of LCD display. The first line of LCD will be selected by the falling edge of LP signal during the high level (FLM).

Anode for common
Display serial output. Can be used to connect to Din of the next SMARTDISPLAY. As a result, many SMARTDISPLAYS can be controlled with one clock and data signal.
Cathode for blue

## PRECAUTIONS FOR HANDLING \& STORAGE OF LCD $36 \times 24$ DEVICES

## Handling

1. The IS Series devices are electrostatic sensitive.
2. Limit operating force to keytop to 100.0 N maximum, as excessive pressure may damage the LCD device.
3. The IS series devices are not process sealed.
4. If the LCD is accidentally broken, avoid contact with the liquid and wash off any liquid spills to the skin or clothing.
5. Clean cap surface with dry cloth. If further cleaning is needed, wipe with dampened cloth using neutral cleanser and dry with clean cloth. Do not use organic solvent.
6. Recommended soldering time and temperature limits:

Do not exceed $70^{\circ} \mathrm{C}$ at the LCD level.
Wave Soldering: see Profile B in the Supplement section.
Manual Soldering for Switch: see Profile A in the Supplement section.
Manual Soldering for Display: see Profile B in the Supplement section.
7. Recommendation for backlight color uniformity: Use constant current driver. For current limiting resistor method, the power source should be at least twice the backlight LED forward voltage.
8. The VLC voltage should not be applied before logic voltage. If VLC voltage is present before logic voltage, it may cause the driver logic to freeze and damage the LCD, and the driver logic may become damaged.
9. Backlight Forward Current should not exceed the derated Absolute Maximum Forward Current based on the temperature.
10. Excessive images may result after the same image is emitted continuously for an extended period of time.

## Storage

1. Store in original container and away from direct sunlight.
2. Keep away from static electricity.
3. Avoid extreme temperatures, high humidity, gaseous substances, and all forms of chemical contamination.
